

Problem 1: Unclear about the details of the event

Solution :

- Add a feature to the educational software that allows students to access important information about each activity.
- Students can register for activities directly in the software with fixed personal information, instead of having to fill in the personal information repeatedly each time

Info

Problem 2 : Unable to know the information about the café operation time

Solution:

- Add a feature to the software that allows students to access restaurant operating conditions and hours, and access the daily menu in this feature

Cafe/Restaurants

Problem 3 : Hard to book the sport facilities

Solution :

- Optimize the booking function by creating a schedule and an overview of booking situations to let users know when they are available and available for booking.
- Students can also register directly in the app to book a venue, instead of having to use google form to fill in their profile repeatedly each time

Problem 4 : Unsure about availability of transport in UTM

Solution :

- Add a real-time updated schedule to keep students up to date on bus information. This will prevent students from wasting time waiting for the bus that has already passed by.
- Add a bookmark feature that allows students to mark the bus they are about to take and notify them before the bus arrives to avoid missing the bus

Problem 5 : Hard to access with website

Solution :

- Create an application that is not limited to computers, but can be used by other smart devices. In this way, students can have a dedicated application for school education, instead of having to log in to the official website and fill out information repeatedly every day to access the school resource site

Problem 6 : Official not receiving feedback quickly

Solution :

- Add a complaint/feedback channel to the software, so users can give their ideas to the developers, to make the application more perfect and friendly user experience.
