

Introduction

An online industrial talk is scheduled for April 4, 2024, from 8 a.m. to 10 a.m., conducted by Mr. TS. ABDUL ALIM ABDUL MUTALLIB, the Product Innovation and Modernization Lead at Theta Innovation Sdn Bhd. Mr. Abdul Alim aims to provide UTM students specializing in Data Engineering with practical industry insights and challenges to better prepare them for their future careers. This event offers a valuable opportunity to enhance both skills and mindset crucial for success in their chosen career paths. Waterfall project, agile framework and azure devOps have been introduced in this talk as to let us improve our knowledge about industry training in the future.

At the meeting, the speaker, Mr.Ts.Abdul Alim Abdul Mutallib discussed different project management approaches. First, he introduced the waterfall project management method. This method follows a step-by-step process including analysis, design, implementation, testing, and maintenance. It's a linear approach, meaning each phase must be completed before moving on, making it less flexible and costly to revisit previous stages. Mr Abdul Alim then introduced the agile hybrid/waterfall approach, which combines elements of both agile and waterfall methodologies. This approach allows for high adaptability by breaking development into smaller iterations or sprints, resulting in incremental product improvements. Mr Abdul Alim emphasized the importance of communication in project development and recommended several tools such as Slack, Teams, Microsoft Project, and Clickup to aid in project organization. These platforms can greatly facilitate project management tasks.

As Mr Abdul Alim mentioned, agile framework is a fundamental intention that the project manages with flexibility, collaboration, and continuous improvement. It includes different types of frameworks such as Scrum, Lean and XP, with Scrum being the main topic tackled by Mr Abdul Alim. The essential roles within Scrum framework are Scrum master who monitors the whole process of the framework, product owner who are the master that give opinion and development team. Scrum is organized into short iterations known as sprints, which include sprint retro to reflect on the previous sprint, sprint planning to plan the upcoming sprint work, daily Scrum which is a quick sync-up meeting and sprint review to gather feedbacks. Mr Abdul Alim emphasized the crucial of active communication in Scrum framework for fostering team cohesion and project alignment.

Mr. Ts Abdul Alim Abdul Mutallib outlines Azure DevOps, a tool his wife's company employs, prior to the Q&A session. It is a set of tools that support various development methodologies, including Agile, as "DevOps" is an extension of Agile methodology. Besides, he also states that Azure DevOps offers a more comprehensive set of features that cover the entire software development lifecycle, from planning and coding to building, testing, and deployment. In a brief way to differentiate, Agile focuses on cross-functional development teams, while DevOps expands on this by integrating operations to expedite software deployment and enhance team transparency overall.

To conclude, Mr Ts. Abdul Alim Abdul Mutallib has provided a comprehensive overview on project management. Valuable insights on real-life working environment were

shared with students too. Overall, the session was engaging and informative, inspiring all SECP2613 students to apply the knowledge gained in their future academic projects.

Reflection

Zhi Ming- Mr. Abdul Alim discussed project management methods like Agile DevOps, Agile frameworks, and Waterfall. He stressed effective communication's importance. This led me to explore recommended applications such as Slack , Teams and ClickUp, seeing their potential to boost productivity. I plan to dive into these tools to improve my work life and project management practices.

Brendan - After listening to the talk by Mr Ts. Abdul Alim Abdul Mutallib, I learnt about the waterfall project management approach and the significance of each phase. Besides, Mr Abdul Alim emphasised the importance of communication skills as a computer science student. Thus, I will spare more thoughts on this area in the future. The speaker also introduced the agile methodology for software development. I will prioritise learning these three frameworks as mentioned by Mr Abdul Alim, which is Scrum, Lean and XP. With the development of AI, I will always remind myself to adapt to the latest development and utilise AI technology to the fullest to excel.

Sabrina - Through the talk brings by Mr. Abdul Alim, he has highlighted the importance of communication skill for a programmer as to know accurately the requirement or needs from people. Otherwise, I have deep knowledge about different type of methodologies for system development such as waterfall methodologies and agile methodologies. Moreover, he also recommends us some of platform to check out for system development example. After his talk, I realized that I have lack of knowledge about this path, and I must go on deeply with these technique and knowledge to enhance my professional growth and career prospects.

Kahsin – Reflecting on Mr. Abdul Alim’s talk sharing centered around agile and waterfall methodologies, I find myself understanding further about their features as well as their pros and cons, respectively. These two project management approaches are commonly used in companies nowadays, and I realize the importance of learning and mastering these fields of knowledge, which is essential for my future career path. Furthermore, he also emphasizes that communication is fundamental to computer science since every phase of development involves plenty of members, each of whom plays a vital role in it. Thus, communication enables a better understanding of the current phase and ensures everything is in progress.

Lok Yee – Mr. Abdul Alim’s talk had provides a thorough overview of project management methodologies for us and his discussion of waterfall, agile, and Azure DevOps illuminated the diverse approaches employed in industry, providing me with a practical lens through which to view my future career in data engineering. The emphasis on adaptability, communication, and continuous improvement encourage me to cultivate these skills for success in my future professional journey. Moving forward, I’ll apply these insights to my academic projects to achieve greater efficiency and collaboration.
